

ENTERPRISE INFRASTRUCTURE SECURITY PROGRAM

Physical security integrators shouldn't have to be IT professionals too

When your clients are making big investments, there's value in having experts on your side to guide you through the whole process and ensure your physical security solution works long-term. The Seneca Enterprise Infrastructure Security Program is a full-spectrum service designed specifically for complex, high-end physical security projects that need more than industry buzzwords and servers.

We use decades of expertise to help translate IT infrastructure into surveillance-specific solutions. In other words, you can skip the confusion and get to the solutions with the Seneca Enterprise Infrastructure Security Program.

We understand larger security installations require more than just a few items off a pricelist. When you've got complex requirements for capturing, analyzing and storing surveillance video, we've got solutions that simplify evaluation, planning and purchasing.

We collaborate with Dell Technologies, so our experts know when and how to integrate emerging solutions like hyperconverged infrastructure (HCI) and virtualization. Seneca can finance everything your customer needs to complete their entire project with Arrow Capital Services available through our parent company, Arrow.

In an industry where tech and capabilities can easily be over-promised and under-delivered, Seneca stands by a commitment to integrity and dependability. That's why there are no hidden consulting costs with Seneca's Enterprise Infrastructure Security Program, the ideal resource for large-scale environments like airports, casinos, colleges and stadiums.

Our white-glove approach includes elite design, project consultation, installation and support services. With the Seneca Enterprise Infrastructure Security Program, security professionals get Seneca resources and expertise capable of project planning, cost analysis and solution architecture. We assist with product staging and deployment with on-site services for both installation and support. Finally, our products come backed by the strongest warranties in the business.

Let us help you design, finance and implement your client's next project.
