

SENECA ACCESS CONTROL SERIES

The Seneca Access Control Appliance is a series of security servers designed for compatibility with Access Control software solutions. The Access Control Appliance stores and manages valuable information to issue badges, to open doors, event and alarm management, and video and other security measures important to your organization.

Seneca has the flexibility to provide a hardware solution for simple door access which only provides enough bandwidth to store badge information, all the way up to managing integrated systems (intrusion, video, alarms, etc.). The integration of access control, event management, and video will require more processing power than simple storage of card holder information, the access control appliance covers all your needs and can be tailored to your project's demands.

KEY FEATURES

- Purpose-Built
- Flexible Architecture
- Lab-Tested
- Global Onsite Warranty

THE SENECA DIFFERENCE

Maestro gets your optimized system up and running in minutes instead of hours. We channeled years of value engineering into an intuitive dashboard that eliminates hundreds of keystrokes. You don't even need an internet connection or data transfer from external drives.
