

# Why Seneca

## Not just another box.

For more than two decades, Seneca has been the trusted name for mission-critical physical security installations.

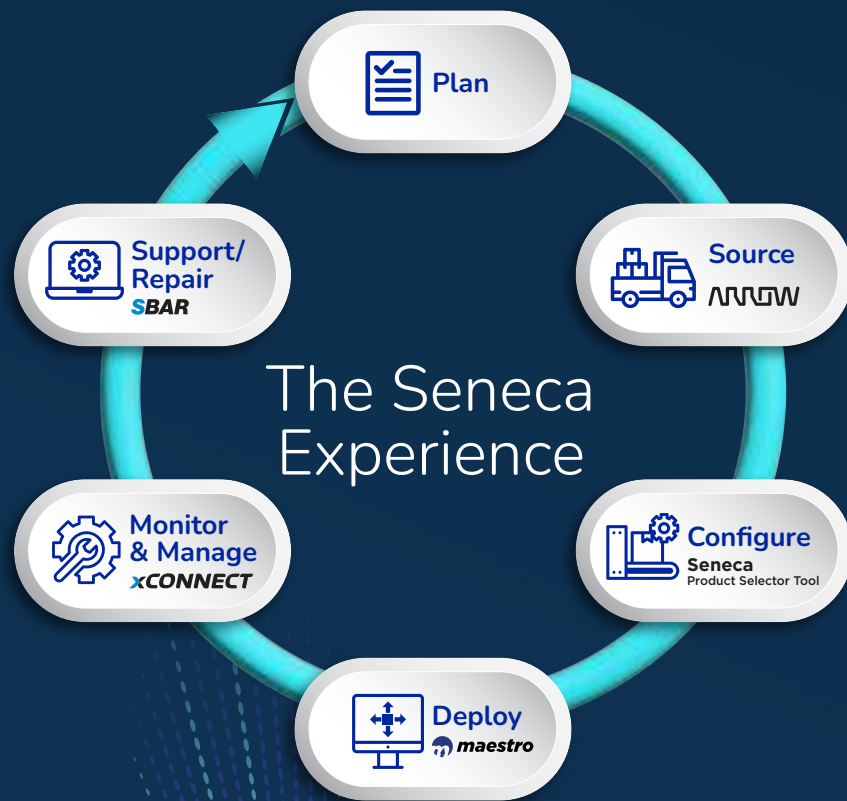

Our hardware ecosystem includes everything from network video recorders and storage servers to viewing stations and analytics servers. We are validated with all the leading VMS companies and **optimize** our systems to ensure peak performance.

## Mitigate Risk. Save Time. Grow Margins.

**Mitigate Risk:** Mitigate risk on your next security installation by working with Seneca. We guarantee our hardware is right-sized for the job and provide software tools to help ensure device health.

**Save Time:** Save time on your next security installation by working with Seneca. Our proprietary software tools mean fast configuration and easy, consistent installs.

**Grow Margins:** Grow your margins by working with Seneca on your next security installation. We save you time and money with fast installs, remote monitoring, disaster recovery, and more.

## The Seneca Experience

### The Seneca Experience

An Arrow Company

# Physical Security Solutions

# Product Portfolio

## Network Video Recorders

Designed with best-in-class enterprise components, these appliances and mission-critical projects go hand-in-hand. All our servers are certified and optimized for the leading Video Management Systems, so you get maximum performance with whichever VMS you prefer.

## Viewing Stations

Seneca xView (viewing stations) are certified and optimized with leading Video Management Software (VMS) companies to ensure complete hardware and software compatibility with guaranteed performance.

## Storage

Powered by NetApp VSS, the Seneca xVault Storage product line combines the best features of Seneca security products and NetApp technology. The xVault line includes SKUs specifically designed and selected by Seneca and NetApp to meet the needs of security installations.

## Analytics

The Seneca Analytics Servers offer tiers of products designed specifically for analytics applications. System specifications carefully align with the required workload for analytic workflow.

## Access Control

The Access Control Appliance stores and manages valuable information to issue badges, to open doors, event and alarm management, and video and other security measures important to your organization.

## Rugged NVR

Seneca's Rugged Server series is designed to accommodate installations for harsh environments and provides a comprehensive product offering that is flexible and versatile. Ideal for environments that require wider operating temperatures, vibration, and shock endurance.

## xCompress

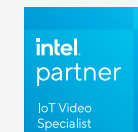

The xCompress Video Stream Optimizer is a powerful video compression appliance designed for mission-critical surveillance installations. Powered by Seneca xCompress video compression software, this appliance allows optimal file compression compatible with industry-leading VMS

## xConnect

Seneca's innovative xConnect platform puts you in complete control of your hardware with an easy-to-use dashboard that allows you to monitor your system remotely. Purpose-built for physical security, xConnect lets you easily monitor your system is performing as intended with maximum uptime.
